

Christmas Tree

Supports life by absorbing carbon dioxide.

Protects water supplies.

The farms that grow Christmas trees stabilize soil.

Provides refuge for wildlife while creating scenic green belts.

Is a renewable resource. For each cut tree, 1-3 or more seedlings are planted.

It is biodegradable and returns to the ecosystem.

Pet friendly decoration line.

While it is in your house, it delights everyone.

The carbon footprint of a real tree is better than the one of an artificial tree.

Happy [eco conscious] Holidays
